

Supplementary project background

This paper was drafted in 2019 and commemorates the 30th anniversary of the summer of 1989 Chalk Group field season in the Lincolnshire Wolds.

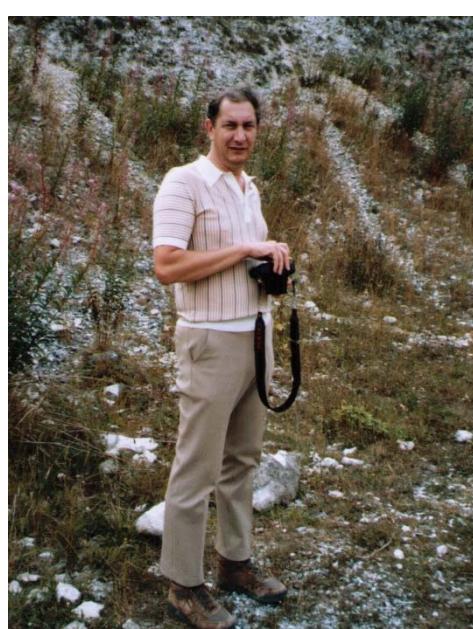

Paul Dodsworth at Caistor Limes Quarry, 30th August 1989.

Paul Dodsworth was an undergraduate at Plymouth University from 1987–1990. He undertook fieldwork in Lincolnshire during the summer of 1989 for his B.Sc. Hons. Applied Geology dissertation, supervised by Malcolm Hart. The field logs and samples from their project were later published in Hart *et al.* (1991, 1993). Their co-worker and palynologist Ailbhe M. Duane inspired Paul to apply to Sheffield University and specialise in palynology (M.Sc., 1992; Ph.D., 1997). He published a follow-up Chalk study from Lincolnshire and Yorkshire in Dodsworth (1996). He has since worked as a biostratigraphic consultant, and founded StrataSolve Ltd in 2006. Following Rory Mortimore and the late Chris Wood's initial report on the 'anomalous succession' at Melton Ross Quarry (Wood & Mortimore 1995), Paul visited and sampled the quarry in February 1997. Some preliminary results were published in Dodsworth (2000), along with a palynological calibration of the base of Turonian GSSP at Pueblo, Colorado; and the Plenus Marls at Durdle Door, Lulworth, southern England.

James S. Eldrett joined Shell Exploration and Production in 2006 as a biostratigrapher. Between 2011 and 2015, James worked in the Integrated Geoscience Research Team based in Houston, US. Here, he commissioned Paul to assist with palynological calibration of Eagle Ford Group outcrops and cores of Cenomanian and Turonian age in Texas. James has published integrated studies of the stratigraphy and geochemistry of the Eagle Ford, both with Paul, and other colleagues and collaborators (Eldrett *et al.* 2014, 2015a, 2015b, 2017; Minisini *et al.* 2018; Dodsworth & Eldrett 2019a, 2019b).

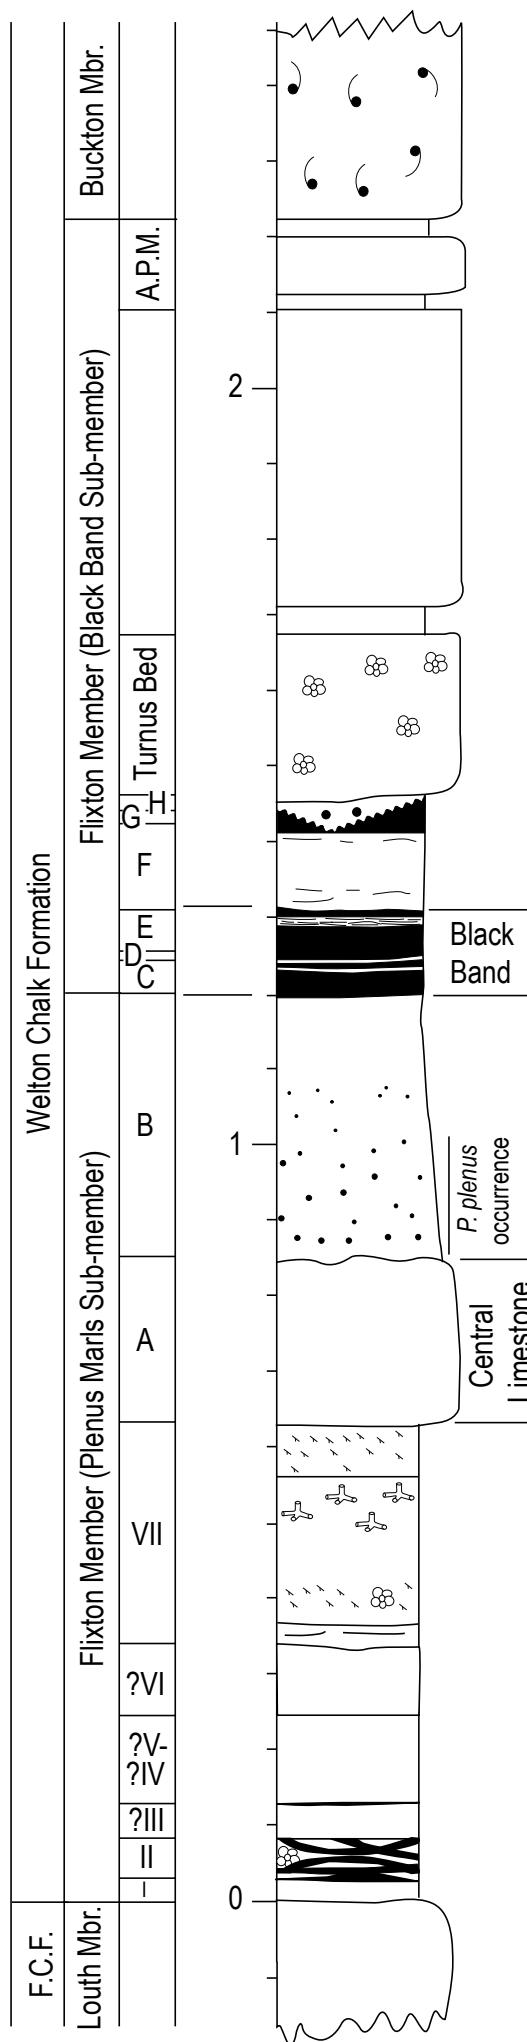

Malcolm B. Hart is an Emeritus Professor at the Faculty of Science and Engineering, Plymouth University, with a research role in micropalaeontology, stratigraphy, ocean acidification and global environmental change. He has published the first (Hart & Bigg 1981) and most recent (Hart 2019) micropalaeontological studies across the Cenomanian–Turonian boundary in eastern England, and plans to analyse the Melton Ross samples that are documented here for palynology and geochemistry.

Malcolm B. Hart at Claxby Quarry, 24th August 1989.

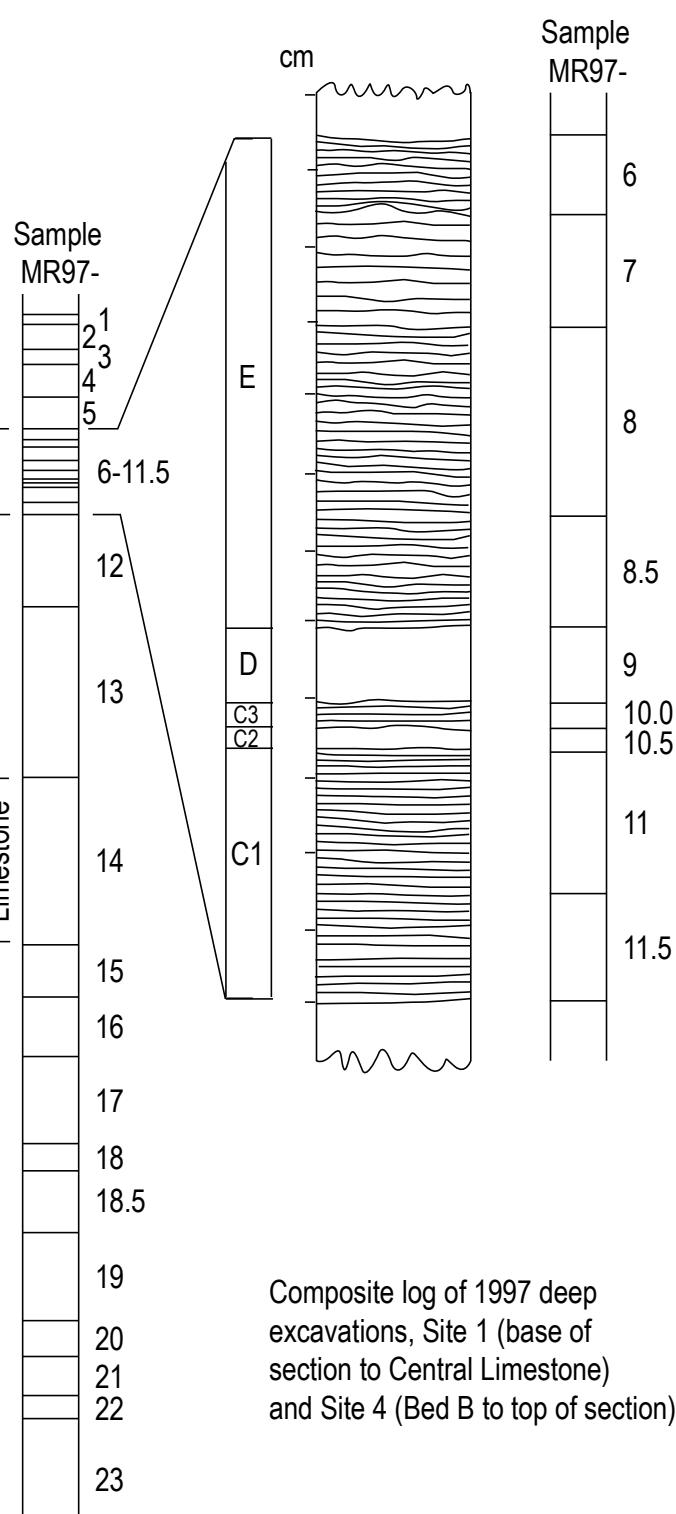

Lithostratigraphy m

Location: Melton Ross Quarry, Lincolnshire

Key:

- A. P. M. = Adrian's Pair of Marls
- F. C. F. = Ferraby Chalk Formation
- Bivalvia (inoceramid) debris
- ❖ Pyrite nodule
- Prominent macrobioturbation
- ↔ Prominent microbioturbation (*Chondrites*)

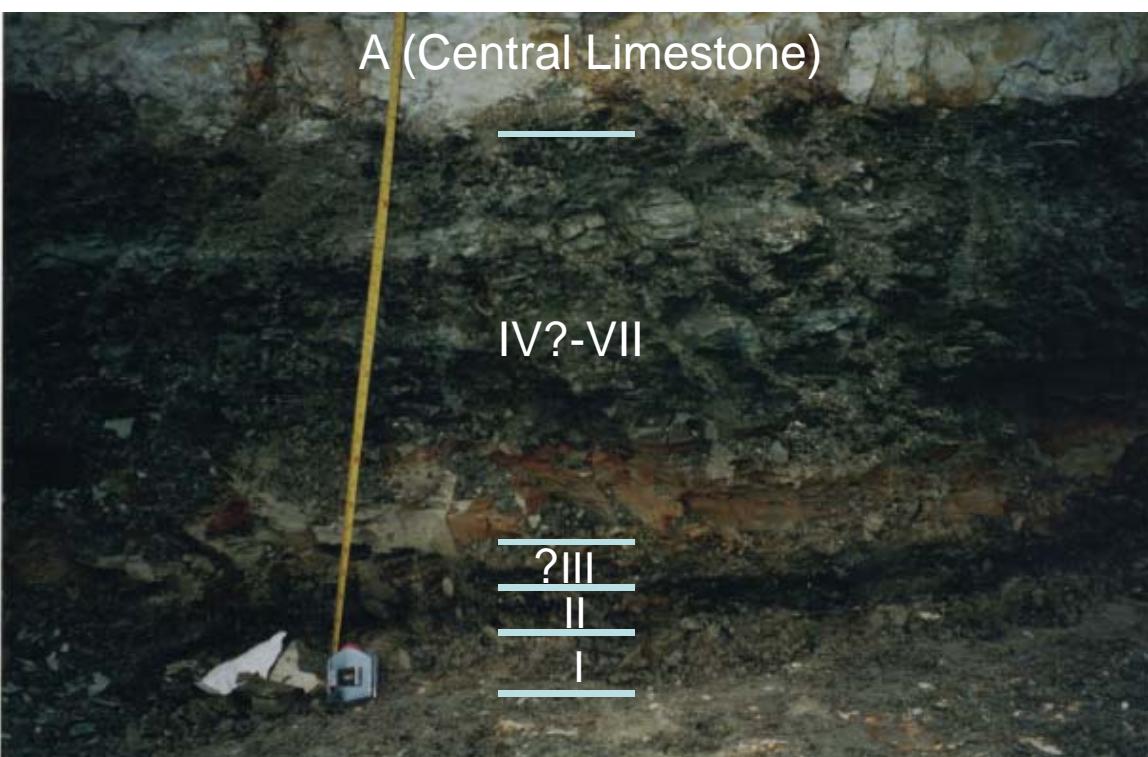

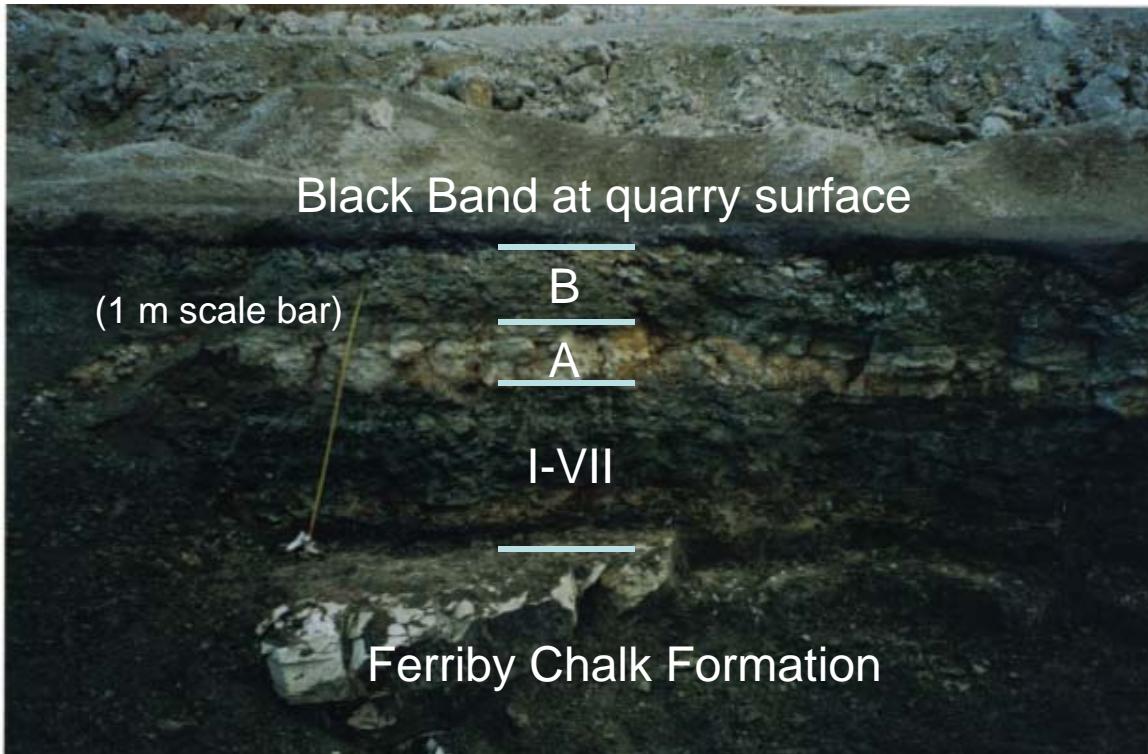

Supplementary Figure. Detailed sample positions.

Composite log of 1997 deep excavations, Site 1 (base of section to Central Limestone) and Site 4 (Bed B to top of section)

Melton Ross Quarry, Site 1, 24th February 1997

Supplementary quarry photographs

Melton Ross Quarry, Site 4, 24th February 1997

Supplementary Appendix

Lithological description of dried rock samples from Melton Ross.

Location: Samples MR97-23 to MR97-14 were collected from the northern end of a temporary trench that was described in Wood & Mortimore (1995), and subsequently identified as Site 1 in Wood *et al.* (1997). Samples MR97-13 to MR97-1 were collected from a temporary excavation approximately 50 m to the north of the trench which is presumed to correspond to Site 4 of Wood *et al.* (1997). Rock colours are from Goddard *et al.* (1948).

MR97-23, -15 cm to 0 cm. Limestone (chalk). Top of the Ferriby Chalk Formation.

Description: Limestone (chalk). Silt grade; massive; indurated; white (N9).

MR97-22, 0 to 3 cm. Marl. Base of the Welton Chalk Formation, local Bed I of Wood *et al.* (1997).

Description: Silty-clay grade; non-fissile; yellowish grey (5Y 8/1); weakly laminated, fairly homogenous with rare (<1 %) grey (N6) discontinuous ?laminae and specks (micro-burrow fills?).

MR97-21, 3 to 8 cm. Marl. Local Bed II of Wood *et al.* (1997).

Description: Silty-clay grade; non-fissile; medium grey (N5; 10 %), medium light grey (N6; 60 %), yellowish-grey (5Y 8/1; 30 %); macro- and micro-bioturbation with traces of lamination; in the field, darker laminae were observed to be patchily developed, patches ca. 100 cm², disrupted by bioturbation and probable dewatering/compaction structures.

MR97-20, 8 to 13 cm. Marl. Local ?Bed III of Wood *et al.* (1997)

Description: Silty-clay grade; non-fissile; greenish grey (5GY 6/1); incompetent, crumbly texture; contorted ?laminae (cf. Bed H, MR97-1).

MR97-19, 13 to 25 cm. Marl. Local ?Beds IV–V of Wood *et al.* (1997).

Description: Silty-clay grade; non-fissile; yellowish-grey (5Y 8/1); massive though tends to cleave parallel to bedding, possibly indicating lamination in relatively homogenous material.

MR97-18.5, 25 to 33cm. Marl. Local ?Bed VI of Wood *et al.* (1997).

Description: Silty-clay grade; non-fissile; greenish grey (5G 6/1); massive, possibly with weak lamination and occasional macro- and micro-bioturbation (*Chondrites*); with very light grey (N8) burrow fills (< 1 %); occasional ?chlorite crystals (ca. 1 mm diameter) present.

MR97-18, 33 to 37 cm. Marl. Local Bed VII of Wood *et al.* (1997).

Description: Silty-clay grade; non-fissile; greyish green (10GY 5/2; 10 %), greenish grey (5G 7/1; 40 %), light greenish grey (5GY 8/1; 50 %); prominent macro-bioturbation; occasional ?chlorite crystals (ca. 1 mm diameter) present.

MR97-17, 37 to 48 cm. Marl. Local Bed VII of Wood *et al.* (1997).

Description: Silty-clay grade; non-fissile; greenish grey (5G 7/1; 70 %), light greenish grey (5GY 8/1; 30 %); prominent micro-bioturbation (*Chondrites*) in the ?lower part of the sample while macro-bioturbation is more marked in the ?upper part of the sample.

MR97-16, 48 to 56 cm. Marl. Local Bed VII of Wood *et al.* (1997).

Description: Silty-clay grade; non-fissile; very light greenish grey (5GY 9/1; 80 %), light greenish grey (5G 8/1; 20 %); prominent macro-bioturbation and occasional micro-bioturbation (*Chondrites*).

MR97-15, 56 to 63 cm. Marl. Local Bed VII of Wood *et al.* (1997).

Description: Silty-clay grade; non-fissile; greenish grey (5G 7/1; 70 %), very light greenish grey (5GY 9/1; 20 %), white (N9; 10 %); prominent intense micro-bioturbation (*Chondrites*) and occasional macro-burrows, usually with lighter-coloured material as burrow fills.

MR97-14, 63 to 85 cm. Limestone (chalk). “Central Limestone”, Bed 3 of Wood *et al.* (1997), Bed A of Dodsworth (1996).

Description: Silt grade; massive; indurated; white (N8.5) to yellowish grey (5Y 8/1). Brachiopod, ?*Orbirhynchia* fragment.

MR97-13, 85 to 108 cm. Marl/limestone. Bed 5 of Wood *et al.* (1997), Bed B (lower) of Dodsworth (1996).

Description: Clayey-silt grade; massive; light greenish grey (5GY 8/1); un-weathered pyrite crystals (ca. 2 mm diameter) present.

MR97-12, 108 to 120 cm. Marl. Bed 6 of Wood *et al.* (1997), Bed B (upper) of Dodsworth (1996).

Description: Silty-clay grade; non-fissile; light greenish grey (5GY 8/1); fairly massive though occasional macro-burrows are present, one with medium grey (N5) burrow fill.

MR97-11.5, 120 to 121.3 cm. Marl. Bed 7a of Wood *et al.* (1997), Bed C(1) of Dodsworth (1996).

Description: Clay grade; non-fissile; dark grey (N3) to medium light grey (N6), fairly massive with little lithological contrast; occasional yellowish grey (5Y 8/1) macro-burrow fill observed.

MR97-11, 121.3 to 123.3 cm. Marl. Bed 7a of Wood *et al.* (1997), Bed C(1) of Dodsworth (1996).

Description: Mainly clay grade with minor silt grade component; non-fissile; medium dark grey (N4; 30 %), medium grey (N5; 50 %), medium grey (N6; 20 %); laminated with occasional macro- and ?micro-bioturbation.

MR97-10.5, 123.3 to 123.6 cm. Marl. Bed 7a of Wood *et al.* (1997), Bed C(2) of Dodsworth (1996).

Description: Silty-clay grade; non-fissile; laminated; medium light grey (N6).

MR97-10, 123.6 to 123.9 cm. Marl. Bed 7a of Wood *et al.* (1997), Bed C(3) of Dodsworth (1996).

Description: Silty-clay grade; non-fissile; dark grey (N3) to medium dark grey (N4).

MR97-9, 123.9 to 124.9 cm. Marl. Bed 7b of Wood *et al.* (1997), Bed D of Dodsworth (1996).

Description: Silty-clay grade; non-fissile; light grey (N7; 90 %), medium dark grey (N4; 10 %); laminated with macro-bioturbation (N4-coloured burrow fills).

MR97-8.5, 124.9 to 126.4 cm. Marl. Bed 7c of Wood *et al.* (1997), Bed E of Dodsworth (1996).

Description: Clay grade; non-fissile; dark grey (N3.5; 40 %), medium grey (N5; 58 %), yellowish grey (5Y 8/1; 2 %); laminated with macro-bioturbation.

MR97-8, 126.4 to 128.9 cm. Marl. Bed 7c of Wood *et al.* (1997), Bed E of Dodsworth (1996).

Description: Silty-clay grade; non-fissile; medium dark grey (N4; 50 %), medium grey (N5; 25 %), light grey (N6.5; 25 %); laminated with macro-bioturbation and occasional micro-bioturbation (*Chondrites*).

MR97-7, 128.9 to 130.4 cm. Marl. Bed 7c of Wood *et al.* (1997), Bed E of Dodsworth (1996).

Description: Silty-clay grade; non-fissile; light grey (N7); laminated with macro- and micro-bioturbation (*Chondrites*).

MR97-6, 130.4 to 131.4 cm. Marl. Bed 7c of Wood *et al.* (1997), Bed E of Dodsworth (1996).

Description: Silty-clay grade; non-fissile; medium grey (N5.5; 75 %), yellowish grey (5Y 8/1; 25 %); ?laminated with macro- and micro-bioturbation; pyrite crystals (< 2 mm diameter) present.

MR97-5, 131.4 to 135.5 cm. Marl. Bed 8 of Wood *et al.* (1997), Bed F of Dodsworth (1996).

Description: Silty-clay grade; non-fissile; light grey (N7; 60 %), very light grey (N8; 25 %), medium light grey (N6; 15 %); ?laminated with macro- and micro-bioturbation (*Chondrites*); un-weathered pyrite crystals (< 2 mm diameter) present.

MR97-4, 135.5 to 139.5 cm. Marl. Bed 8 of Wood *et al.* (1997), Bed F of Dodsworth (1996).

Description: Silty-clay grade; non-fissile; yellowish grey (5Y 8/1; 97 %), light grey (N7; 3 %); micro-bioturbation (*Chondrites*).

MR97-3, 139.5 to 142 cm. Marl. Bed 8 of Wood *et al.* (1997), Bed F of Dodsworth (1996).

Description: Silty-clay grade; non-fissile; yellowish grey (5Y 8/1; 85 %), light grey (N7; 15 %); macro- and micro-bioturbation with light grey burrow fills. Pyrite nodules up to 2 cm diameter present.

MR97-2, 142 to 144 cm. Marl. Bed 9 of Wood *et al.* (1997), Bed G of Dodsworth (1996).

Description: Silty-clay grade; non-fissile; lowest 5 mm is dark grey (N3; 85 %), medium grey (N5; 15 %); upper 15 mm is medium grey (N5; 50 %), light grey (N7; 25 %), yellowish grey (5Y 8/1; 25 %); laminated with the proportion of lighter coloured laminae increasing upwards; occasional macro- and micro-bioturbation, including a chalk-filled macro-burrow; an un-weathered pyrite nodule, ca. 1.5 cm diameter, is present on the upper, pale surface.

MR97-1, 144 to 145 cm. Marl. Bed 10 of Wood *et al.* (1997), Bed H of Dodsworth (1996).

Description: Silty-clay grade; non-fissile; crumbly texture, incompetent; light greenish grey (5GY 8/1); erosional contact with Bed G, in places containing reworked Bed G clasts (medium grey N5 to light grey N7 in colour), 1 mm to 7 mm in diameter.

Rock-Eval data key

* Tmax value unreliable due to very low S2 signal

HI = Hydrogen Index (S2/TOC*100)

OI = Oxygen Index (S3/TOC*100)

PI = Production index (S1/S1+S2)

PP = Production Potential (S1+S2)

Data provided by APT UK Ltd, 4th March 2019

Supplementary Table H. Total organic carbon (TOC) and Rock-Eval pyrolysis data for selected samples.

Locality: Flixton, Yorkshire (former quarry exposure).								
(Not to scale.)								
Litho-strat.	Lithology	Sample	T/M ratio	Dinoflag. %	Prasino. %	Acantho. %	Counts per g (total)	Notes on (former) outcrop
Bed E		Ysa-131	0.273	57	14	1.7	183,392	Samples collected from a ca. 30 cm interval. See Jeans et al. (1991) & Dodsworth (1996) for lithological logs and sample positions.
Bed D		Ysa-90	0	100	0	0	205	
Bed C3		Ysa-89	0.207	72.6	5.7	1	17,688	
Bed C2		Ysa-88	0.037	94	1	1.3	7,216

B1/B4		SP-9	0.057	87.7	3	3	10,795	72 to 73 cm

Dark marls 57,933 - 187,733 (105,960 cpg):

Phytoplankton 47,331 - 179,660 (96,196 cpg);

Pollen/spores 977 - 25,437 (9,764 cpg).

Notes:

Bed F passes laterally from marl to limestone lithology to the north of Market Weighton (Jeans et al. 1991; Dodsworth 1996; Mitchell 2000).

Samples SP-2 & SP-3 are from the upper 8 cm and lower 10 cm of Bed F, respectively, where dark grey marl laminae are present in chalk; the intervening 22 cm of Bed F is massive chalk limestone. Most or all palynomorphs in SP-2 & -3 may be derived from the dark marl laminae.

Supplementary Table I (1/6). Palynomorph concentration data from two Yorkshire localities in the northerly Cleveland Basin.

Sources: Flixton, Dodsworth (1996); Speeton, formerly unpublished data (P. Dodsworth).

Locality: East Knapton Quarry, Yorkshire.								
(Not to scale.)

		B-21					0	50 to 69 cm
		B-22					0	
Bed B1		B-23					0	69 to 70 cm
Bed A	limestone	B-24					0	70 - 82 cm

Dark marls 15,579 - 96,600 (63,961 cpg):

Phytoplankton 13,086 - 92,206 (60,507 cpg);

Pollen/spores 901 - 5,050 (3,454 cpg).

Notes:

Bed D tentatively picked on slightly lighter marl at Bigby (sample B-9 to B-11).

* = heavily weathered samples (poor palynomorph preservation) excluded from range and mean figures.

Large proportions of prasinophytes in samples B-5 to B-7 and B-16 to B-18 may be mainly due to their preferential preservation in weathered samples. However, their abundant occurrence in better preserved samples B-9 and B-10 may indicate relatively high numbers at this location.

See the correlation panel in Dodsworth (1996, fig.2) for lithological log of this section.

Palynologically barren sample localities: Louth & South Thoresby (Lincolnshire), Heacham (Norfolk).

Supplementary Table I (5/6). Palynomorph concentration data from Bigby.
